

UCSM - AI Hackathon 2026

27.8.2026

ကယ်တင်ရှင်

Presented by *Avengers*
Team - VI

The Problem

- Currently, Myanmar is facing various natural disasters such as floods and earthquakes.
- Recently, a dam in Lay Myat Nar Township in Ayeyarwady Region unexpectedly broke, causing flooding throughout the city.
- This incident caused people to face difficulties and suffering due to the flood.
- Rescuers also helped, but depending on the location and situation of the people trapped, they might not be able to find 10 out of 10 people.
- Therefore, there is a need for a smarter and more efficient system to help people during emergencies.

The Solution

- “ကယ်တင်ရှင်” is a smart website that helps people during floods and other disasters.
- People can report what they need, such as drinking water, food, medicine, and shelter.
- The system shows where help is needed and what kind of help is needed.
- Rescuers can use this information to help people faster and more effectively.
- This helps make sure that people who need help can get the right support at the right time.

Technical Stack & Architecture

- Our system uses a simple integrated architecture.

HTML 

CSS 

JavaScript 

JSON 

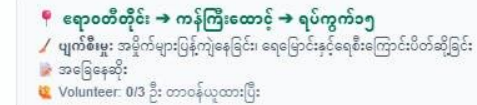

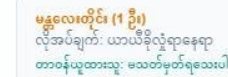

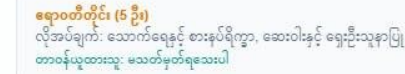

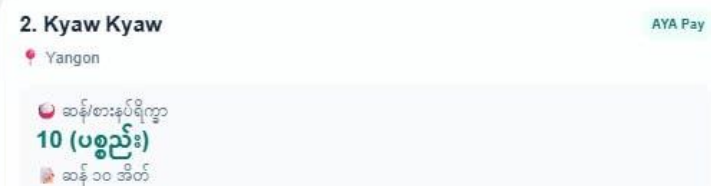

MySQL 

- They work together as one system.
- We do not strictly separate frontend and backend, which makes the prototype simple, flexible, and easy to develop.

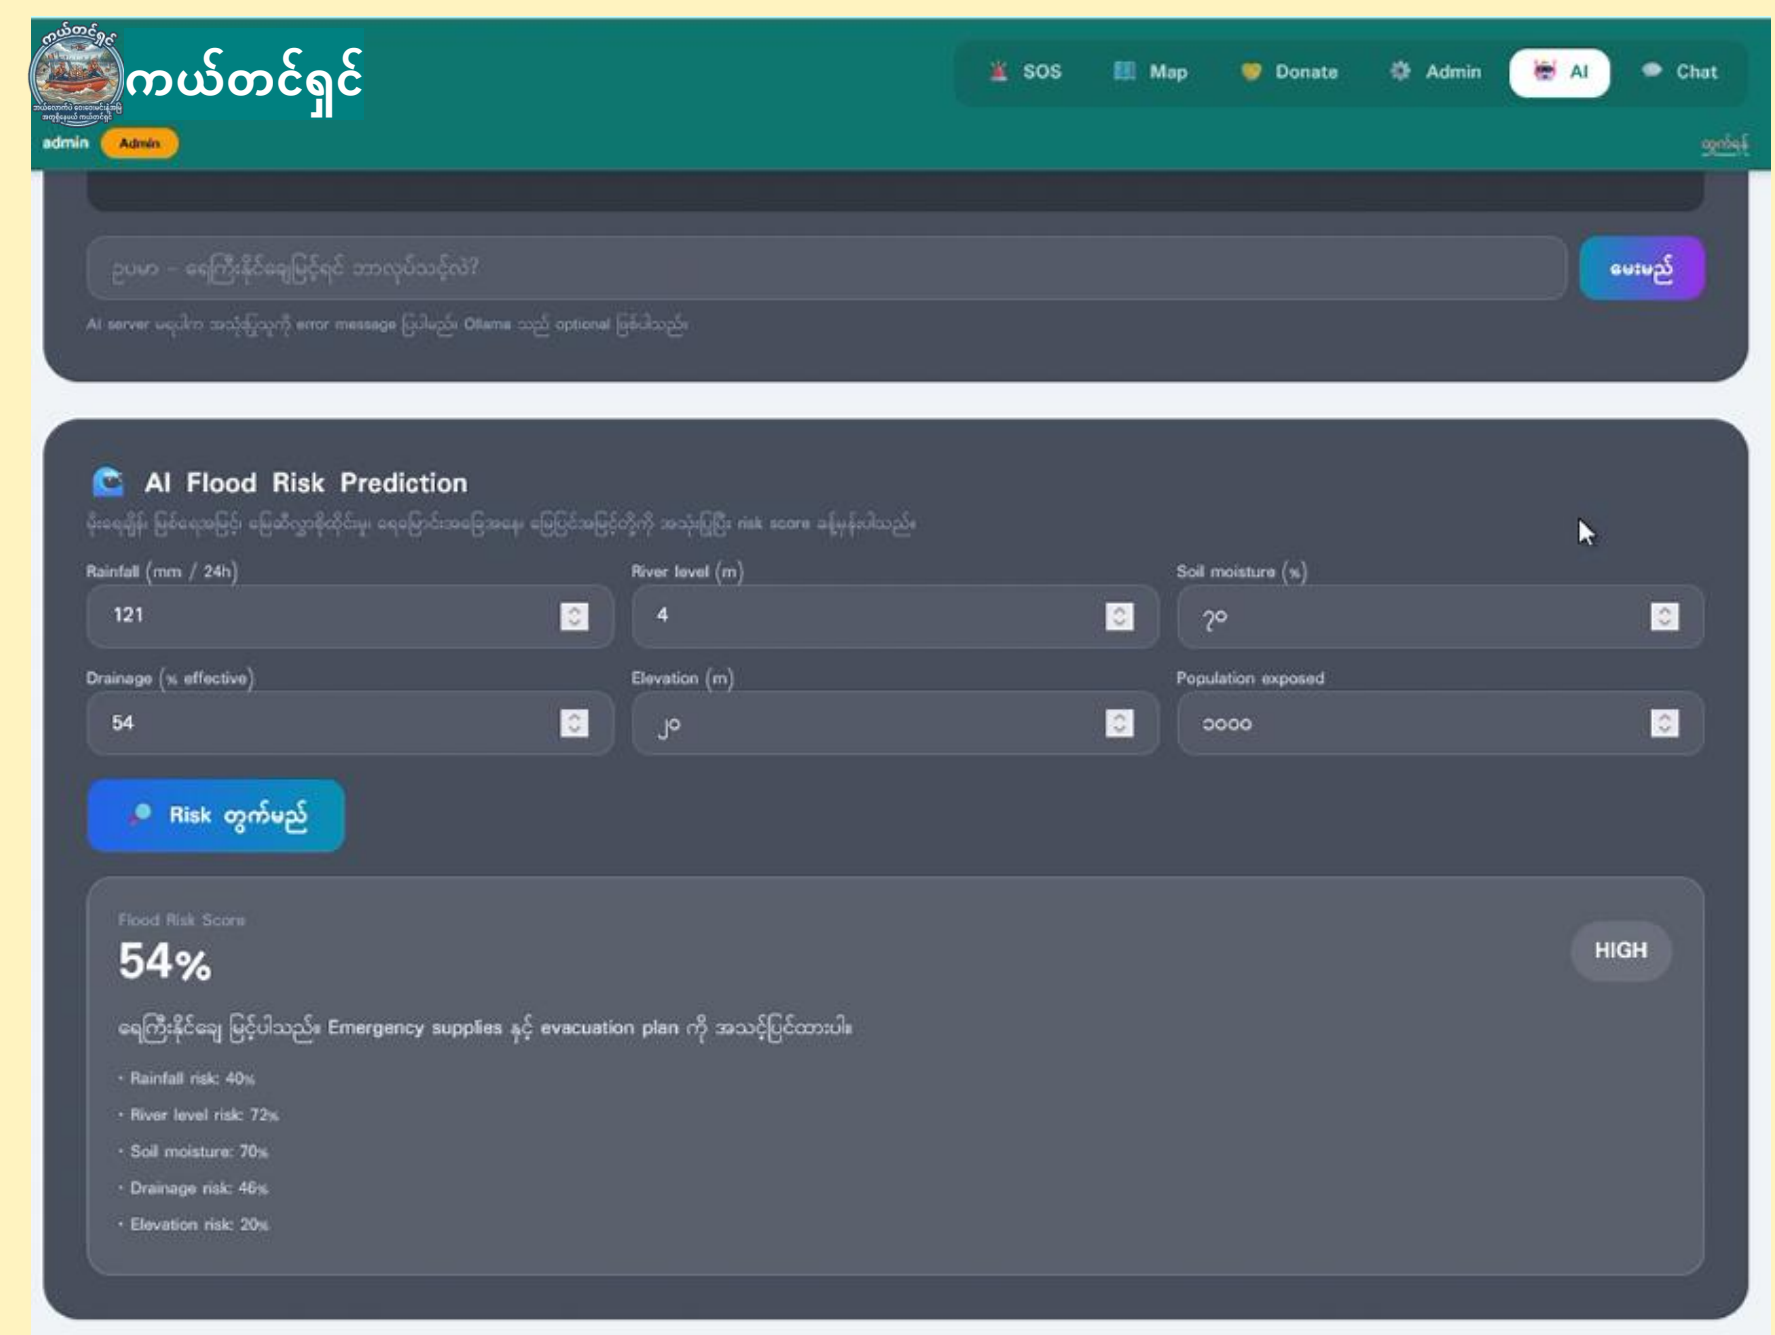

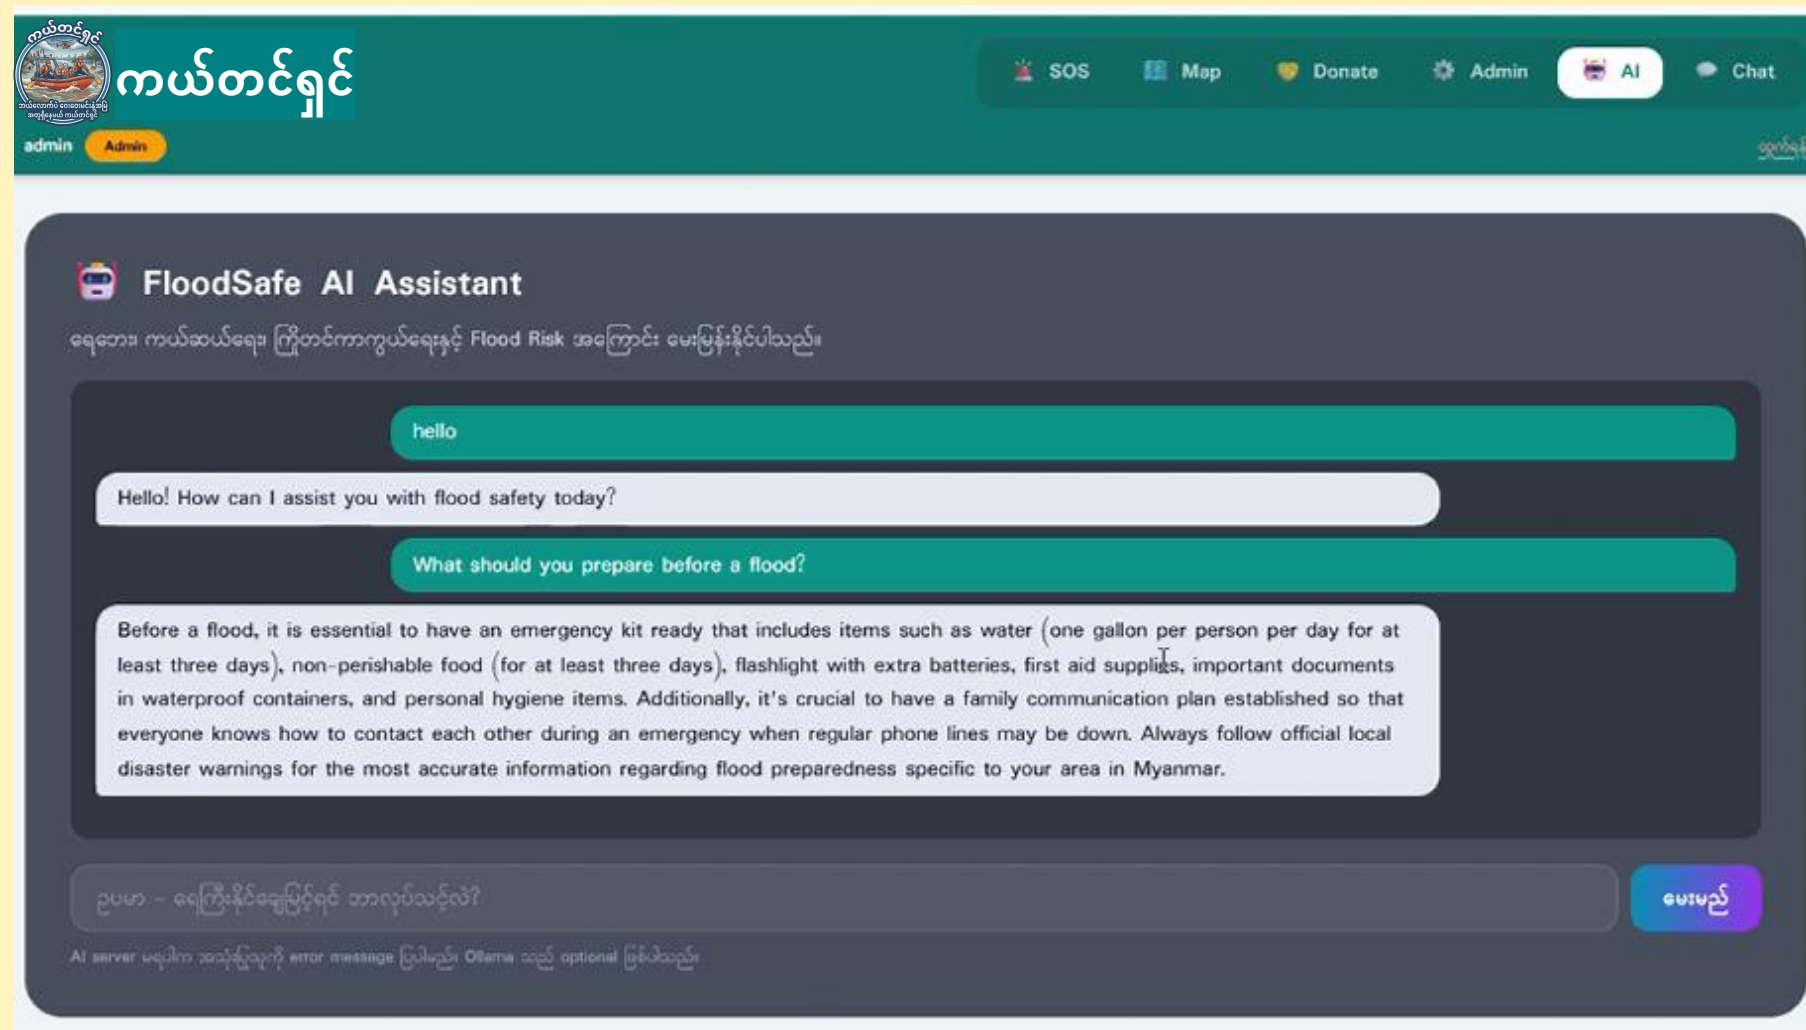

Now,
let's explore how
“ကယ်တင်ရုံ”
works!

The excluded AI features due to Time Limit

Our Little Weakness

- Needs a touch of internet connection to launch the SOS rocket!

Green Environment-Smart Technology

- Users can request volunteers to help with environmental cleanup and recovery directly through the system.
- Users can report problems such as trash bins, damaged roads, blocked drains, and broken trees.
- This helps keep streets and communities clean and green.
- It's also encourages people to work together for a better environment.

Future Potential

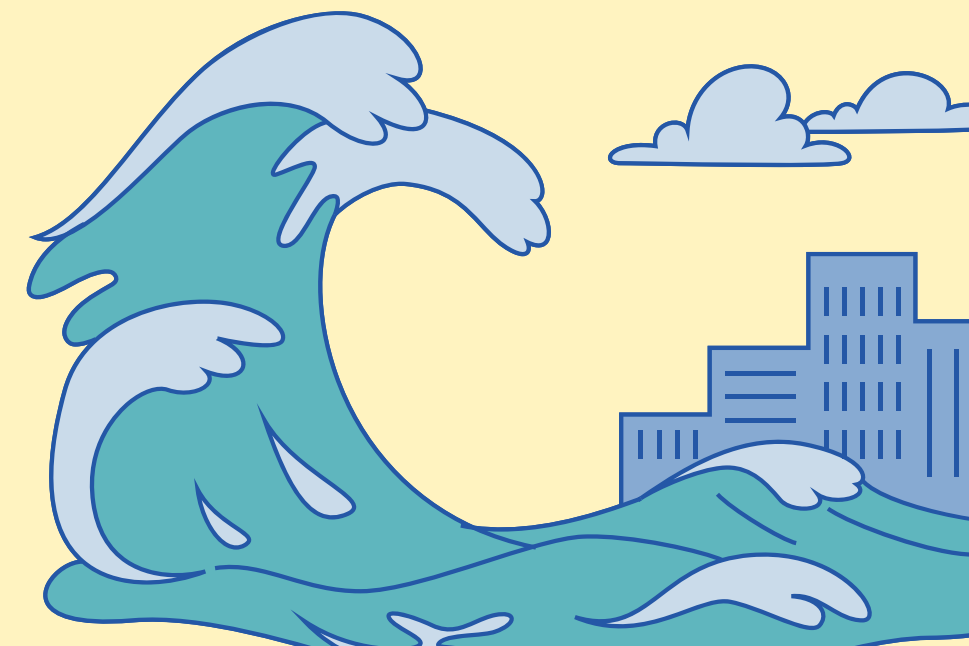

- “ကယ်တင်ရှင်” is not only for floods.
- It can be modified for different types of disasters in the future.
- It can support in emergency situations such as earthquakes, storms, landslides, and fires.
- The system can be updated based on the needs of each disaster.
- Our goal is to build a flexible disaster-response system for the future.

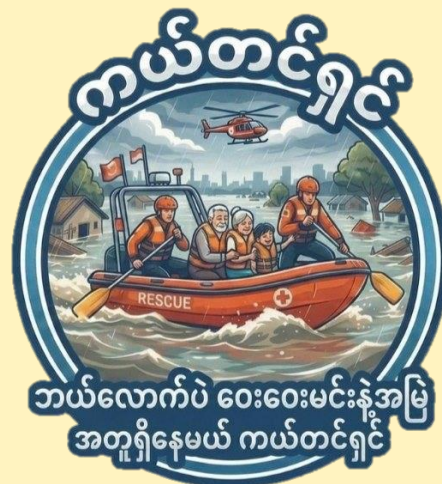

Conclusion

- “ကယ်တင်ရှင်” is not just a website, but a helpful tool for flood emergencies.
- Provides quick and effective emergency assistance during floods.
- It connects people and rescue teams to reduce risks and support what they need.
- In the future, we hope to make it smarter, faster, and more useful for everyone.

ဘယ်လောက်ဘဲဝေးဝေး၊

မင်းနဲ့အမြဲအတူရှိနေမယ့် “ကယ်တင်ရှင်”

Thank You for your attention!

We are expecting advice from you!
