Problems During Emergencies

- Difficult to find the nearest shelter or hospital
- Unclear where to go in unfamiliar areas
- Time wasted searching for help
- Risk of choosing unsafe or longer routes
- Emergency locations are not centralized.

Why This Problem Matters

During a disaster, people need clear information and fast decisions, not just a map. Even when shelters and hospitals are available, people may not know:

- which one is closest,
- how far it is,
- or how to reach it.

SafePath was designed to connect people, safe places, and emergency support in one system.

SafePath Solution

SafePath is a location-based emergency navigation system that:

- Detects the user's current location.
- Shows nearby shelters and hospitals on the map.
- Calculates the distance to emergency locations.
- Finds the nearest available safe place.
- Provides directions to reach the selected location.
- Allows users to request help through the “I Need Help” function.

How SafePath Works

Current Location → Nearby Safe Places →
Distance Calculation → Best Location →
Route & Direction

When the user presses “I Need Help”, the system uses their current location to identify the nearest suitable shelter or hospital and provides a route to reach it.

Smart Features

-  Real-Time User Location
-  Interactive Location Map
-  Shelter & Hospital Markers
-  Distance Calculation
-  “I Need Help” Emergency Button
-  Nearest Safe Place Recommendation
-  Route & Direction Guidance
-  Emergency Camp Management
-  Admin Dashboard

Benefits of SafePath

SafePath helps users:

- Find safe locations faster.
- Reduce confusion during emergencies.
- Avoid unnecessary travel.
- Reduce the time needed to search for help.
- Reach shelters or hospitals using clear directions.
- Make faster and more informed decisions.

For administrators, the system provides a centralized way to manage and update emergency camps.

Smart Technology in SafePath

SafePath combines:

Location Services + Digital Mapping + Distance
Calculation + Route Recommendation + Emergency Data
Management

Instead of only displaying emergency locations, the system uses the user's position to calculate which location is the most practical to reach

Supporting a Smarter & Greener Community

SafePath supports sustainable emergency management by:

- Reducing unnecessary travel during disasters.
- Helping people use nearby existing shelters and hospitals efficiently.
- Improving the use of emergency resources.
- Supporting organized and location-based disaster response.
- Reducing inefficient movement and congestion around emergency areas.

Expected Impact

For Citizens:

Faster access to safety and emergency support.

For Emergency Teams:

Better organization of shelters and camps.

For Communities:

More efficient use of available resources.

Overall:

Less Confusion • Faster Response • Smarter Navigation
• Safer Communities

Navigation and Distance Estimation

The screenshot displays the OpenStreetMap website interface. At the top, the 'OpenStreetMap' logo is visible alongside navigation links: 'Edit', 'History', 'Export', 'GPS Traces', 'User Diaries', 'Communities', 'Copyright', 'Help', 'Donate', and 'About'. A user profile 'saw bbb' is logged in at the top right.

The main map area shows a street grid with numerous red location pins. A blue line indicates a calculated route. The left sidebar contains the 'Directions' panel, which shows a route from '5 + 6, 79th Street, Kit Sa Na Ma Hi War' to 'Royal Rose Hospital, 78th Street, Kit Sa'. The route details are as follows:

- Distance: 659m. Time: 0:03.
- 1. Start on unnamed road (300m)
- 2. Continue on (၇၈) လမ်း (200m)
- 3. Turn left onto 32nd Street (60m)
- 4. Turn left onto unnamed road (50m)
- 5. Reach destination

Below the directions, there are links to 'Download route as GeoJSON', 'Directions courtesy of OSRM (FOSSGIS)', and 'More details from OSRM (FOSSGIS)'.

The right sidebar features the 'Map Layers' panel, which lists several map styles: 'Standard', 'CyclOSM', 'Cycle Map' (highlighted with a blue border), 'Transport Map', 'Tracestrack Topo', 'Humanitarian', and 'Shortbread'.

The map itself shows a street grid with labels such as '28th Street', '29th Street', '30th Street', '31st Street', '32nd Street', '33rd Street', '34th Street', '84th Street', '85th Street', '77th Street', 'Chan Hospital', 'Children's Clinic', 'Happy Cafe and noodles', and 'Royal Rose Hospital'. A scale bar at the bottom left indicates 200m and 500ft. The bottom of the map credits 'OpenStreetMap contributors' and 'Tiles courtesy of Andy Allan'.

Establishment of Emergency Rescue Station Notice

The screenshot displays the SafePath application interface. At the top left, the logo "SafePath" is accompanied by the tagline "REAL-TIME EMERGENCY RESPONSE". On the top right, there are language and user controls: "EN" and an "Admin" button with a shield icon. The background is a map of an urban area with street names like "30th Street", "31st Street", "32nd Street", and "33rd Street". Overlaid on the map is a white modal window with a green header bar that reads "Emergency camp saved and is now visible to users." Below this, a text instruction says "Manage orange markers. Every saved camp is visible to all users." The modal contains a card for a user named "SayTaNaMon" with the status "ACTIVE · 10/100 people" and buttons for "Edit" and "Delete". To the right of this card is a section titled "Add a camp at an exact map location" with an icon of a person in a tent. It includes the instruction "Click the button, then click once on the map where the orange marker should appear." and a large green button labeled "+ Add Camp". Below this button is a "Sign out" link. On the right side of the modal, a partially visible "PATH RECOMMENDATION" section shows the text "is within reach." and "location details, then open turn-by-turn". Below the modal, a "Nearest locations" section lists "Royal Rose Hospital".
